Snow forecast - Monday 14 January 2013

It's a wintry looking week ahead with further snow in places. This time the heaviest snow will be in the south-eastern Alps – especially south and east Austria and the Italian Dolomites.

Detailed snow forecast:

Austria

Most places will be cold and cloudy today (**Monday**) with some snowfall. The snow will be light and patchy in the west (e.g. **St Anton**) heavier further south and east (e.g. **Nassfeld**) where significant falls are likely to low levels.

It will remain mostly cold and cloudy on **Tuesday** with a little snow in places, heaviest in the far south close to the Italian border. **Wednesday** and **Thursday** will see more general snowfall at all levels, still heaviest in the south and east.

Fresh snow today in Obertauern - Photo: www.skiworld.at

France

It's generally cold and cloudy this morning (**Monday**) particularly in the northern Alps where there is still the odd flake of snow. It's brighter in the south, however, and it should brighten up a further north too, particularly at high altitude. It will remain cold on **Tuesday** with some light snow for many areas, perhaps moderate for a time in the north-western Alps (e.g. **La Clusaz**).

Early flurries should die out from the northern Alps on **Wednesday**, then most places should be dry but still chilly with the best of any sunshine further south. The southern French Alps will remain dry and bright on **Thursday**, but northern parts could again see a few flurries in a strengthening (and bitter) north-easterly wind.

A bit cloudy in Les Saisies this morning but the sun may break through later - Photo: www.lessaisies.com

Italy

Western Italian resorts (e.g. **Cervinia**) will be mostly dry today (**Monday**) with plenty of sunshine. It will be increasingly cloudy further east, however, with snow at times – especially in the eastern Dolomites where some significant accumulations are likely to relatively low altitudes.

Tuesday and **Wednesday** will see further snow in the eastern resorts, heavy at times. Further west it will be brighter at times, but some light snow flurries are also likely, especially close to the French border regions. It will remain cold everywhere. **Thursday** should become dry in the west, but further flurries may continue further east, especially close to the Austrian border.

Switzerland

Except for the odd light flurry, most places will be dry today (**Monday**), but cold and rather cloudy, particularly in the northern Alps. The best of any sunshine will be in the south, but other regions may brighten up a little later, particularly at altitude.

Tuesday will see some (mostly light) snow spreading into the northern and western Alps. Southern and eastern areas will start bright but a few flurries are likely here later in the day. It will remain cold everywhere. Further snow flurries are likely in many places on **Wednesday** and **Thursday**, heaviest in the northern Alps with the best of any brightness further south.

It's not cloudy everywhere today – this is Zermatt - Photo: www.zermatt.ch

Outlook:

Remaining cold for the foreseeable future with further snowfalls possible, particularly in the eastern Alps.

Next detailed snow forecast will be on Thursday 17 January, but see [Today in the Alps](#) for daily updates
