Snow forecast - Sunday 24 March 2013

It's another cool and unsettled week in prospect for the Alps with further snow at times (though not generally in huge quantities).

Detailed forecast:

Austria

Monday will be cold and mostly cloudy with the chance of snow flurries (to low levels) almost anywhere. It will become colder still on **Tuesday** with snow flurries becoming more widespread for a time.

Wednesday will remain cold, but any snow flurries will become lighter and more scattered again with some sunny spells appearing, especially in the north. **Thursday** should be mostly dry with good sunny spells and milder temperatures.

Still reasonably bright in the far north of the Austrian Alps today (Sunday). This is Lungötz near Salzburg.

France

Monday will be mostly cloudy with a few mostly light flurries (1000m) here and there. The best of any brightness will be in the southern Alps. **Tuesday** and **Wednesday** will be a little colder still with the odd flurry in the northern Alps (800m). The southern Alps should be fine with some sunshine.

Thursday may see more persistent snow return to the French Alps, especially the south.

Cloudy with some snow for Orcières in the southern French Alps today (Sunday) - Photo: www.orcieres.com

Italy

Monday will be mostly cloudy with a few snow flurries, particularly in the east. The best of any brightness will be further west. **Tuesday** will see snow showers (900m) become more widespread across the eastern Italian Alps. Showers will be more scattered further west.

On **Wednesday** any snow flurries should become light again with the best of any brightness in the west. On **Thursday** the situation will be reversed with snow showers likely in the west and the driest, brightest weather further east.

Snowing today in much of the Italian Alps. This is Sestriere - Photo: www.vialattea.it

Switzerland

Monday will be mostly cloudy with a few light snow flurries (600-900m) here and there. It will become a little colder on **Tuesday** with more widespread snow showers (600m) for a time.

The odd snow flurry is still possible on **Wednesday**, but many places will be dry and bright, though still rather cold. On Thursday it should remain dry and bright in the north and east, but cloud will increase in the south-west later with snow showers possible later in the day.

Cloudy but mostly dry across western Switzerland today. This is Champéry in the Portes du Soleil - Photo: www.idelec.ch

Outlook:

It looks like it will remain changeable for the foreseeable future with further snow in places. However, temperatures are likely to increase a little with rain also possible at lower elevations.

Next detailed snow forecast will be on Thursday 28 March, but see [Today in the Alps](#) for daily updates
