Snow forecast - Thursday 28 March 2013

It will remain very unsettled over the next few days with further snow in places.

Detailed forecast:

Austria

The rest of today (**Thursday**) will be mostly dry with just the odd shower in the north and west (snow 1400m). Overnight most areas will see some snow showers (600-100m) but accumulations are not expected to be significant. **Friday** will begin mostly cloudy with a few showers (snow 800-1000m) but these should die away and many places will have some bright or sunny spells.

Saturday will see bright spells and scattered showers (snow 800-1200m) but, again, accumulations are expected to be modest. On **Sunday**, some more widespread snowfall is expected (400-600m) the heaviest of which will be in the south-west.

A scene typical of Austria in Kitzbühel today. Mostly dry but mostly cloudy - Photo: www.kitz.net

France

The rest of today (**Thursday**) will be cloudy with outbreaks of snow (above 1000-1400m) heavy at times. Snow will continue into the first part of the night with total accumulations of 40cm+ in a few favoured spots - more generally 15-30cm at 2000m. **Friday** will begin dry, perhaps even bright, but cloud will thicken up again to bring further snowfall later. The rain/snow limit will rise to 1500m during the afternoon.

It will remain unsettled on **Saturday** with showers or longer spells of snow above 1000-1300m, heaviest in the northern Alps. On **Sunday**, the southern Alps should be dry and bright whilst northern areas continue to see a few flurries. It will become colder too, with a biting north-easterly wind.

Italy

The rest of today (**Thursday**) will be mostly cloudy with snow (800m) becoming heavy in some western regions (e.g. **Courmayeur, La Thuile**), and lighter and patchier the further east you go. Some parts of the Dolomites, for example, may stay dry. The weather will improve on **Friday** with some spells of sunshine for most, particularly early on. However, cloud will thicken up again in the west with a little snow possible (900m) later.

Saturday will be variable with a few snow flurries, again mostly in the west with plenty of dry, bright weather further east. On **Sunday**, however, there may be some heavier snow for a time in the eastern Italian Alps whilst western parts remain mostly dry. It will turn colder everywhere.

Switzerland

The rest of today (**Thursday**) will be cloudy with outbreaks of snow (800-1200m), heaviest in the west where significant accumulations are likely at altitude. On **Friday** many areas will start dry and bright, but cloud will increase with showers or longer spells of snow likely in the west by early afternoon, spreading east later. The rain/snow limit will rise to 1200-1500m for a time before dropping again later.

It will remain unsettled on **Saturday** with further snow showers (1000-1200m), heaviest in the north and west. Some southern and south-eastern parts may remain dry. It will turn colder (and windier) on **Sunday** with a few snow flurries in places, but also some brighter spells.

Heavy snow in western Switzerland today. This is La Fouly south of Verbier.

Outlook:

It will remain unsettled and relatively cool for the foreseeable future, with further snow at times.

Next detailed snow forecast will be on Monday 1 April, but see [Today in the Alps](#) for daily updates
