### Snow forecast

Updated: 5.30pm Monday 13 January 2014

Most places will see at least a little snow over the next 24 to 36 hours, some places - particularly the south-eastern Alps (e.g. the Dolomites) - quite a lot! Yet again, however, the lower resorts of the northern Austrian Alps (e.g. Söll, Kitzbühel, Schladming) will see little if any snow.

---

#### Detailed snow forecast:

##### Austria

**Monday** night will stay mostly dry but some showers (snow 800m) will move into the far west (Vorarlberg, west Tirol) later. **Tuesday** will see further snow showers (600-900m) in these western districts as well as the south (close to the Italian border). Further north and east (Salzburgerland, Upper Austria) it will be mostly dry with a mixture of cloud and bright spells.

On **Wednesday** a few snow flurries (400-800m) are still possible in the eastern Austrian Alps at first otherwise it will be mostly dry with the best of any sunshine in the west. **Thursday** should be dry with sunny spells.

---

##### France

**Monday** night will be cloudy with outbreaks of snow, initially above 1200-1400m but dropping to under 1000m before dying out later. Tomorrow (**Tuesday**), a few flurries may persist close to the Italian border (800m) otherwise it should gradually brighten up - though further flurries are possible for a time on Tuesday evening. Above 1800m we can expect about 15-20cm from this storm, a little more in places.

**Wednesday** will be dry with some sunshine, but increasing cloud later in the day. It will be a little milder with freezing levels close to 1600m. **Thursday** is likely to be cloudier, but mostly dry in the northern Alps, with some light snow possible (1600m) in the southern Alps.

---

##### Italy

**Monday** night will be cloudy with some mostly light snow (900m) in the western Alps, drier to start with further east, but a few flurries reaching the Dolomites later. **Tuesday** will see some early snow showers (800m) in the western Italian Alps die away to allow some brighter spells to develop. Further east there will be more cloud with the chance of some significant snow for the Dolomites (20-50cm).

On **Wednesday** the last of the flurries will die away from the eastern Italian Alps, then all areas should brighten up with the best of any sunshine in the west. **Thursday** is forecast to be mostly dry, but cloud will thicken in the western Italian Alps later where the odd snow flurry (1200m) is possible.

Still bright this afternoon in Livigno, but snow is expected here tomorrow.

## Switzerland

**Monday** night will be cloudy with outbreaks of snow spreading east to most regions. The snow will fall above 1200-1500m at first but drop to below 1000m later. Above 1800m most regions can expect 10-20cm, perhaps a bit more in the far south-east. **Tuesday** will start mostly cloudy but it should brighten up as the day goes on in the western Swiss Alps. Snow flurries are likely to continue further east for much of the day, particularly the south-east close to the Italian border.

On **Wednesday**, the last of any flurries should clear the far east of Switzerland then most places will be dry with sunny spells. **Thursday** should be mostly dry with the best of any sunshine in the east. Further west it will cloud over later.

More snow for the Portes du Soleil this evening. This is Les Crosets - Photo: idelec.ch

### Outlook:

It looks like remaining unsettled towards the end of this week with further snow particularly for the southern Alps. More widespread snow and colder temperatures are currently on the table for next week.

**Next detailed snow forecast will be on Friday 17 January 2014, but see [Today in the Alps](#) for daily updates**
