### Snow forecast

**Updated: 4pm Monday 27 January 2014**

Snowfall has been favouring the northern Alps in recent days. This week, however, it will be Italy and the southern Alps that do best, with some significant snow expected on Wednesday and Thursday.

Further north there will be little or no snow in the short term, and although a weak Foehn wind will raise temperatures a fraction, there will be no drastic thaw and conditions should remain relatively good.

---

#### Detailed forecast:

##### Austria

On **Tuesday**, snow flurries will give a few more cm in places, chiefly in the south and east (east of Innsbruck). It will be drier and brighter in the western Austrian Alps and snow flurries elsewhere should slowly die out later in the day.

**Wednesday** will be mostly dry but rather cloudy in the south, brighter with some sunshine in the north and west. It will feel a little milder, especially in the north.

**Thursday** will see snow spreading across the Italian border into Carinthia (e.g. Nassfeld) and parts of the Ost-Tirol (e.g. Lienz). Most other regions will be dry if rather cloudy with the best of any brightness in the north and west.

Plenty of snow now at resort level in Kitzbühel, but that's it for a while - Photo: kitz.net

---

##### France

**Tuesday** will start mostly sunny, but some high cloud will spread in later in the day, particularly in the southern Alps.

**Wednesday** will see snow (800-1000m) for the southern French Alps, particularly the far south (e.g. Isola 2000) where some significant accumulations are likely. The northern Alps will be mostly dry, but with lots of high cloud blotting out the sun at times.

**Thursday** will see little change with the chance of further snow in the southern Alps, and mostly dry but rather cloudy further north.

---

##### Italy

**Tuesday** will be dry with plenty of sunshine in the western Italian Alps (e.g. Sestriere, Courmayeur, Cervinia). Further east, there may be more cloud and the odd snow flurry, particularly at first, but some brighter spells are expected too.

On **Wednesday** it will be the Dolomites that see the most sun, while snow flurries are expected to develop in the west, heaviest to the west and south-west

of Turin (e.g. Sestriere, Limone).

On **Thursday** most of the Italian Alps are likely to see some snow at times, heaviest in the eastern Aosta valley (e.g. Pila) through Lombardy (e.g. Livigno) and into the western Dolomites (e.g. Madonna di Campiglio).

Bright today in the Monterosa region, but more snow is expected mid-week. This is Gressoney.

### Switzerland

**Tuesday** will be mostly dry with sunny spells across all Swiss resorts.

**Wednesday** will remain dry and fairly bright across the central and northern Swiss Alps, but cloud will thicken in the south with the chance of a few snow flurries spilling across the Italian border later (e.g. into Zermatt).

**Thursday** will see little change with further snow possible close to the Italian border, but will be drier and increasingly bright the further north you go.

### Outlook:

It will remain changeable through the weekend with further snow in places, chiefly in the southern and eastern Alps.

**Next detailed snow forecast will be on Friday 31 January 2014, but see [Today in the Alps](#) for daily updates**
