## Snow forecast

Updated: 12pm Monday 10 February 2014

It's another unsettled week in store for the Alps, but not by any means the write-off it looked a few days back. The heaviest of the snow will be across the southern Alps today and the western Alps later in the week. There will be plenty of fine weather around too, particularly mid-week.

---

### Detailed forecast:

#### Austria

**Monday** afternoon will see some snow (700m) close to the Italian border, otherwise most areas will be dry but rather cloudy with the best of any brightness in the north. A strong Foehn wind will hamper lift operations in places. Tonight snow showers will begin to spread to other parts of the Austrian Alps (700-900m) lingering into **Tuesday** morning. Later on Tuesday it will brighten up from the west.

**Wednesday** will be mostly dry with sunny spells and relatively mild temperatures. **Thursday** will start dry, but cloud and showers (snow 1400m) will spread into the far west later. The central and eastern Austrian Alps will stay mostly fine.

Stormy skies over southern Austria today, but there will be plenty fine weather this week too. This is Lienz near the Italian border - Photo: foto-webcam.eu

---

#### France

**Monday** afternoon may start dry in some internal valleys of the northern French Alps, but snow (1200-1400m) already across the western and southern Alps will reach all regions by the end of the day - and will continue for a time tonight. On the whole, the heaviest snow will be across the southern Alps. Wind will be an additional hazard and will affect some lift operations, particularly at altitude.

**Tuesday** will be drier and brighter with some sunshine expected in all regions. A few snow showers are possible in places on Tuesday night then **Wednesday** should again be fine with long sunny spells. On **Thursday**, new weather fronts are expected to arrive from the west with snow for most, heaviest in the north.

---

#### Italy

**Monday** afternoon will be cloudy across all Italian resorts, with snow (600-800m) heavy at times which will continue into the night. Tomorrow (**Tuesday**) early snow flurries will die away from the eastern Italian Alps then all areas can expect a reasonable day with sunny spells.

**Wednesday** should be the best weather day of the week with plenty of sunshine in all areas. It will start fine on **Thursday** too, but thicker cloud and a few snow flurries may reach western parts later.

### Switzerland

**Monday** afternoon will be mostly cloudy with some snow (600-900m) spilling over the Italian border into the far south (and perhaps west). Many other areas will be dry, but rather cloudy until tonight when snow showers will become more widespread.

**Tuesday** will start cloudy in places, particularly the east, where further snow flurries are possible for a while. Brighter, drier weather is expected to spread to all areas during the day with the best of the sun in the south. Further snow showers are possible on Tuesday night, but **Wednesday** should be mostly dry and bright.

**Thursday** will see further snow (1000-1400m) move in from the west affecting all but some southern areas by the end of the day.

#### Outlook:

Remaining unsettled but never particularly cold, with further snow at times, heaviest at altitude and in the north and west.

**Next detailed snow forecast will be on Friday 14 February 2014, but see [Today in the Alps](#) for daily updates**
