## Snow forecast

**Updated: 2.30pm Monday 24 March 2014**

The storm responsible for this weekend's heavy snow is drifting off eastwards. However, pressure will remain relatively low over the next few days with a mixture of sunny spells, scattered snow showers and coolish temperatures. On the whole, any additional snowfall this week will be modest and some places may stay completely dry.

---

### Detailed forecast:

#### Austria

**Tuesday** will remain cool with a scattering of snow showers to low levels across the northern Austrian Alps leaving an additional few cm in places. Elsewhere, it will be mostly dry with sunny spells, especially in the south-west.

**Wednesday** will be mostly dry with a mixture of cloud and a few sunny spells. An isolated shower (snow 1000m) is still possible in the far south close to the Italian border.

There will be little change on **Thursday** except that the threat of showers (snow 1300m) will increase in the far south. The best of any sunshine will be in the northern Alps.

A mixture of cloud and sun is the order of the week across the Alps. This is Astental in southern Austria – Photo: www.foto.webcam.eu

---

#### France

**Tuesday** should start bright in most regions. However, cloud will thicken up later in the day with scattered showers (snow 900m) adding a few more cm of snow here and there. Some places may remain dry, however.

**Wednesday** and **Thursday** will see a mixture of cloud and brighter spells for all parts with a few showers (1000-1200m) breaking out as the day wears on – these most likely close to the Italian border. The greatest chance of staying dry and bright will be close to the western foothills of the Alps.

---

#### Italy

**Tuesday** will be cool and often bright, but with occasional light snow flurries here and there – slightly more likely late in the day in the western Alps.

There will be little change on **Wednesday** and **Thursday**, with a mixture of cloud, occasional bright spells but also occasional showers or flurries (snow 1000m) giving an additional few cm here and there.

---

**Tuesday** will be mostly dry with bright or sunny spells. However, a few light snow showers (900m) can't be ruled out, especially in the far south and west later in the day.

There will be little change in the weather on **Wednesday** with a lot of cloud around, but also a few brighter spells here and there. A few well scattered showers (1000m) will also develop during the course of the day.

On **Thursday** the risk of showers (snow 1200m) increases a little in the southern Swiss Alps. Elsewhere there will be sunny spells and only isolated showers.

---

#### Outlook:

Scattered showers (snow 1200-1500m) are still possible in the southern Alps on **Friday**, but most places should be fine and a little warmer over the weekend.
