Snow report

Updated: 1.50pm Thursday 26 February 2015

It's another positive snow report for the Alps, with good to excellent snow conditions just about everywhere, and plenty more snow in the forecast.

Over the last couple of weeks, new snowfall has (on the whole) been fairly evenly spread across the Alps, which means there are currently very few weak links. One exception is the central and eastern Dolomites (e.g. **Sella Ronda**), but even here they have had some top-ups and (on-piste at least) snow conditions are still good.

Elsewhere in the Alps there is very little to complain about, with further snow in the offing – mostly for the western Alps on Friday, but then more widely later in the weekend and into next week.

We should also make special mention of the Pyrenees where, not for the first time this season, there have been some truly exceptional snowfalls (1.5m in 36 hours in places) which has led to some resorts being cut off.

Austria

There was fresh snow in the central and eastern Austrian Alps yesterday – as much as 40cm on the Kitzsteinhorn glacier above **Kaprun** where settled snow depths are 30/310cm depending on altitude.

Further west, snowfall was more modest in **St Anton** (50/230cm), but conditions here and across the Arlberg in general remain excellent thanks to multiple recent top-ups.

Only in the far south is spring really starting to show its hand, with plenty of greenery on south-facing slopes in **Bad Kleinkirchheim** (10/60cm). Austria will miss most of the snow forecast further west on Friday, but may do better later next week.

Good snow conditions across most of Austria. This is Zell-am-See - Photo: foto-webcam.eu

France

Conditions across the French Alps are generally excellent even if snow depths are unremarkable for late February.

There is no particular bias towards northern or southern resorts, with equally enjoyable skiing in the likes of **Serre Chevalier** (50/190cm) and **Les Gets** (70/170cm).

The next snow is due tomorrow (Friday), though the far south (Alpes Maritimes) may largely miss out.

Fabulous skiing across the French Alps. This is Les Saisies with Mont Blanc in the background - Photo: lessaisies.com

Italy

Italian resorts continue to offer excellent skiing with the very best conditions at altitude in resorts such as **Cervinia** (60/310cm), **Champoluc** (60/180cm) and **Livigno** (70/80cm).

If there remains a weak link it is in the central Dolomites, but even here there was a useful top-up earlier in the week and **Selva di Val Gardena** (15/110cm) still offers perfectly decent on-piste conditions.

Better snow conditions in the western Dolomites than in the east. This is Madonna di Campiglio - Photo: funiviecampiglio.it

Switzerland

Snow conditions in Switzerland are excellent across the board following multiple snowfalls over the last couple of weeks. **Andermatt** (90/480cm) may boast the most impressive figures, but lower resorts such as **Wengen** (35/120cm) are also in tip-top shape.

Further snow is forecast tomorrow (Friday), heaviest in the west.

Rest of Europe

The Pyrenees have seen huge snowfalls in recent days – 1.5m or more in places, which has sent the avalanche danger rocketing. **Piau Engaly** (currently cut off)

in France has quite staggering snow depths of 440/480cm, while **Baqueira Beret** in Spain has 285/410cm.

Bulgarian resorts remain in good shape with healthy base depths of 60/225cm in **Bansko**, where more snow is expected towards the end of the week.

Norway is also offering excellent skiing with some of the deepest freshest snow, again in the western resort of **Voss** (110/195cm). By contrast Sweden's **Åre** (45/55cm) has only seen the odd dusting here and there but, on-piste at least, conditions are fine.

In Scotland the weather has been pretty wild at times, but there is still plenty of snow with prospects for March looking good. **Cairngorm** has base depths of 40/110cm depending on altitude.

USA

Snow conditions are pretty good across Colorado right now, with fresh snow in places and lots more in the forecast over the next few days. **Breckenridge** has 170cm packed down mid-mountain while, further south, **Telluride** has 165cm.

Jackson Hole (193/224cm) in Wyoming also has a little fresh snow – as does **Alta** (180cm mid-mountain base) in Utah, which is offering reasonable conditions despite being below par by its own super-snowy standards.

Canada

Whistler's frustrating season continues with no meaningful snow in the last week and very little in the forecast. There is reasonable on-piste skiing to be had, especially on the upper mountain, but the 143cm base is way below where it should be for late February and off-piste is highly variable.

Further inland, conditions are more consistent (as they have been all season) with an upper base of around 153cm in the **Banff/Lake Louise** area and 199cm in **Revelstoke**.

Snow depths are below par in Whistler right now - Photo: whistlerblackcomb.com

Next full snow report will be on Monday 2 March 2015, but see [Today in the Alps](#) for daily updates
