Snow forecast

Updated: Thursday 29 November 2013

A weakening weather front will slide across the Alps from the north tonight, with light to moderate snowfall in many areas.

Snow showers should gradually die out tomorrow, except across the south-western Alps (e.g. Sestriere) where they are likely to reinvigorate thanks to low pressure forming over the Gulf of Genova.

Detailed snow forecast:

Austria

Friday night will see a spell of mostly light to moderate snow to low levels, heaviest in the north-west (e.g. Arlberg).

On **Saturday**, snow showers will be prevalent early in the day, but should gradually die away with some sunny breaks in the northern Alps later. It will be cold with any snow falling to the valley bottoms.

Sunday and **Monday** will be dry and mostly sunny. It will start to turn a fraction milder too.

France

Friday night will see a spell of light to moderate snow to low levels, first in the northern Alps, spreading slowly south later.

The snow should die away on **Saturday** morning, except close to the Italian border in the south (e.g. **Isola 2000**, **Montgenèvre**) where it may linger all day. Other areas should see a few brighter spells later.

Sunday and **Monday** should be mostly sunny, but a few clouds may remain in the south close to the Italian border. It will still be cold on **Sunday**, a little milder on **Monday**.

Italy

Friday night will be dry at first, but a few snow flurries are likely later.

Saturday will see snow flurries at first, dying out over the eastern Italian Alps, but becoming heavier in the south-west (e.g. Sestriere, Sauze d'Oulx) where some significant falls are possible.

A few snow showers may linger in the far south-west on **Sunday** and **Monday**. It may also be cloudy at times in the Dolomites. Otherwise most other regions should see plenty of sunshine and it will also start to turn a little milder.

Clear this evening in Sestriere, but it may be in line for the heaviest snow tomorrow – Photo: sestriere.it

Switzerland

Friday night will see some light to moderate snow arrive from the north, always heaviest on the northern side of the Swiss Alps and falling to low levels.

Saturday will start mostly cloudy with snow flurries, particularly in the north. Brighter spells should develop later in the day, particularly in the south. It will remain cold.

On **Sunday** and **Monday** it will be largely sunny and slowly turning milder, particularly at altitude.

Outlook:

Most of the Alps will be dry with plenty of sunshine on **Tuesday** and **Wednesday**. However, some Italian resorts may have more cloud at times, especially in the far south-west and the Dolomites where a few showers cannot be ruled out. It will feel noticeably milder than of late.

Next detailed snow forecast will be on Monday 2 December 2013, but see [Today in the Alps](#) for daily updates
