Snow forecast

Updated: Monday 25 November 2013

The Alps remain under the influence of a cold north-easterly airflow with plenty of fine weather, but a continuing chance of snow flurries in the east, especially Austria.

New weather fronts are expected to bring more widespread snow back across the Alps next weekend, but the intensity and distribution of any snow is hard to pin down at this time.

Detailed snow forecast:

Austria

Monday afternoon and **Tuesday** will see some sunny spells but also a lot of cloud, with scattered snow flurries, most persistent in the north-east. The best of any brightness will be in the south but it will feel cold everywhere, with any snow falling to the valley bottoms and a keen north-easterly breeze.

Wednesday will see more in the way of sunshine everywhere and just isolated snow flurries in the east. It will remain cold

On **Thursday** the southern Austrian Alps should remain sunny, but cloud will increase in the north with the chance of a few showers. It will turn a little milder with the rain /snow limit rising to between 600-900m.

France

Monday afternoon and **Tuesday** will be mostly sunny at altitude, but sometimes cloudy in the low valley bottoms, particularly in the northern foothills. It will feel cold, particularly in areas exposed to the biting north-easterly wind.

The weather will continue in a similar vein on **Wednesday** and **Thursday**, though the wind will slowly ease and it will start to feel milder at altitude.

Italy

The entire Italian Alps are expected to be dry with plenty of sunshine all week. It will be on the cold side, however, particularly early in the week when the north-easterly wind will be at its strongest.

From mid-week onwards it should start to feel a bit milder, particularly at altitude.

Switzerland

Monday afternoon will be mostly dry with plenty of sunshine at altitude. Some stubborn low cloud will remain in the valley bottoms of the northern and western foothills. A few snow flurries may reach the far north-east this evening. It will feel cold everywhere with a biting north-east wind.

There will be little change on **Tuesday, Wednesday** or **Thursday**, with plenty of sunshine at altitude but low cloud again a problem in some of the lower valleys. It will remain on the cold and windy side but start to feel a little milder at altitude on **Wednesday** and **Thursday**. The wind will also start to die down from mid-week onwards.

Outlook:

Another blast of arctic air is expected to reach the Alps from the north by the weekend. This means that further snow is likely for most regions, though it is too early to say how significant this will be or where will get the most. Stay tuned with our daily updates in [Today in the Alps](#).

Next detailed snow forecast will be on Thursday 29 November 2013, but see [Today in the Alps](#) for daily updates
