### Snow forecast

Updated: 2pm Friday 15 November 2013

Following Friday's snowfall the weather will settle down again over the weekend, with the best of any sunshine at altitude and in the northern Alps. It will feel milder too, with freezing levels creeping up towards 3000m.

The next lot of significant snow is likely to reach the south-western Alps on Tuesday possibly spreading further north and east on Wednesday – though there is a lot of uncertainty about this right now.

Temperatures will start to drop again mid-week with the possibility of some severe cold for a time. Stay tuned with our daily updates in [Today in the Alps](#).

#### Detailed snow forecast:

##### Austria

**Saturday, Sunday** and **Monday** will all be similar weather-wise with some mist or fog in the low valleys but plenty of sunshine higher up. It will feel relatively mild, especially at altitude, with freezing levels close to 3000m at the weekend, dropping to around 2400m on Monday.

##### France

**Saturday** will be mostly dry with plenty of sunshine though some cloud may linger close to the Italian border, particularly in the south (e.g. **Isola 2000**) where the odd snow flurry (1700m) cannot be ruled out. It will feel milder than Friday, with freezing levels reaching 2600m in the northern Alps later.

**Sunday** and **Monday** will be similar to Saturday with some cloud at times in the southern Alps and the best of any sun further north. Freezing levels will reach 2800m over the weekend before starting to drop again early next week.

## Italy

**Saturday** will see a few early snow flurries in the south-western Italian Alps (1300m) otherwise most regions will be dry with sunny spells.

**Sunday** will again be mostly dry and bright with variable cloud amounts and just the chance of the odd shower (snow 1800m) in the far western Italian Alps. It will feel milder than of late, especially in any sunshine.

On **Monday** many places will stay dry but cloud amounts are likely to increase with the risk of a few showers (snow 1800-2000m) almost anywhere later.

## Switzerland

**Saturday** and **Sunday** will be dry and mostly bright with some valley mist and fog but plenty of sunshine at altitude. It will feel milder than of late with freezing levels creeping towards 3000m.

On **Monday** most areas will again be dry, but cloud amounts will increase in the far south of the country where the odd shower (snow 1800m) cannot be ruled out close to the Italian border.

### Outlook:

The weather models are very uncertain as to what is going to happen beyond **Monday** but it is likely that a deepening Mediterranean low will bring heavy snow to the southern (particularly south-western) Alps which may spread further north on **Wednesday** and **Thursday**. It will also turn colder again – perhaps very cold for a while.

**Next detailed snow forecast will be on Monday 18 November 2013, but see [Today in the Alps](#) for daily updates**
